

## Southram “Leader Sheep” Sires:

**Ari 91-969.** A leader ram born in 1991. Ari was black blazed with white belly and feet. He was intelligent looking, calm and alert. Both of Ari's parents were from lines of purebred leader sheep.

**Prestur 94-863.** A black spotted horned ram born in 1994.

**Biskup 96-822.** A black spotted horned ram born in 1996. He carries moorit and is blazed with white socks. He is said to be sensible and calm, with an intelligent look.

---

**Blesi 98-884.** A spotted black horned leader ram, born in 1998. He is the grandsire of Leifur 02-900. Blesi has a spotting pattern traditionally shown by leader sheep: a white blaze, white socks, and in his case, a white bib.

---

**Skumur 01-885.** A black spotted leader ram born in 2001. Skumur is the son of Blesi 98-884.

---

**Leifur 02-900,** a horned black/gray spotted ram born in 2002. He has an unusual spotting pattern as he shows very little color and is mostly spot. He is a grandson of Blesi 98-884.

---

**Geri 03-986.** Geri is moorit, spotted. He is big and gracious with good horns and coarse body as expected from a leader sheep. He's very calm and has very good leader characteristics. Geri broke both his front legs but was very easy to handle during his hospital visit, which shows how sensible and calm he is. Geri is a distant relative to other AI leader rams at Southram during recent years. [<http://southram.bssl.is>] He is the great-great grandson of Ari 91-969.

---

**Tigull 04-939.** Tigull is horned and black spotted with white socks. He is very calm and easy. His eyes are sharp and he's eager to learn. Easily controlled. Tigull carries variation of colour and patterns. [<http://southram.bssl.is>]

---

**Loftur 04-970.** Loftur is horned and black spotted and has rather narrow horn curving. He is not experienced as leader because of his age but seems to be bright, calm and easy as well as eager to learn. Easily controlled. Loftur is of a very well known leader bloodline though he is rather little related to other AI leader rams. [<http://southram.bssl.is>]

---

**Karl-Philip 05-827.** “Karl Philip is horned and moorit spotted. He is very calm and sensible with obvious leader abilities. He is also also very easy to handle but demands the royal dignity his name indicates. Karl Philip is of a very well known leader bloodline from Klifshagi farm (Sandfellshagi farm, Oxarfjordur, Northeast Iceland) though he is rather little related to other AI leader rams. Generations back in his bloodline Skumur 01-885 can be found as well as Blesi 98-884 and Formann 80-961. Those rams were well known AI leader rams.”  
[<http://southram.bssl.is>]

---

**Joakim 08-863.** Joakim has most of the advantages that a good leader requires. He is black spotted with good horn curving. Joakim is calm and very well awake concerning his surroundings. He is also very easy to handle. His daughters are big with obvious leader abilities. Joakim is rather little related to other AI leader rams except Leifur 02-900 which is his double great grandfather.  
[<http://southram.bssl.is>]

---

**Golsi 09-916.** Golsi is moorit badgerface, horned, beginning his second year as an AI ram. He’s five years old and therefore becoming experienced as a leader ram. Golsi is tall and lightbodied as leader sheep are supposed to be. He is curious with a brave looking face and fast movements as well as intelligent and royal behaviour. He is gentle and eager to please people when handling and driving. Golsi shows lot of intelligence in many aspects, but whether he’s good in predicting bad weather is hard to tell because all sheep are housed now a days. His ancestors were extremely sensible concerning weather changes so it’s likely that Golsi has those abilities. Golsi’s badgerface pattern was formerly very common amongst leader sheep in Iceland. Golsi carries moorit, badgerface and spotted. [<http://southram.bssl.is>]
